Pipe Organ & Choir

Christ Episcopal Church

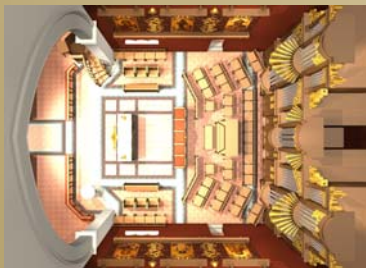

Bradenton, Florida

Completed 2007

The interior of this 1950s era church was totally renovated to bring all systems up to date, improve the acoustics of the space, provide a new pipe organ and provide a dignified and flexible chancel and choir. The side aisles are also being added to provide additional seating as well as additional space for processions. We designed all the furnishings as well as the organ case in a Spanish style influenced by the traditions of gulf coast Florida architecture. The woodwork is Mahogany with gold leaf accents. The chancel floor is a combination of colored marble, limestone and hand made terracotta tiles.

The drawings shown here are some of the computer renderings prepared by our office to show the Client what the overall effect of the renovation would be when completed.
